

ITDEV 117 Milestone Project 1

Movie Theater App

The app will allow the moviegoing audience looking to see a movie and order food.

The app will allow users to create a log in, choose a movie to see, a specific time to see said movie, and pre-order multiple food items. Upon completion of choices a ticket price will total all chosen items, and display a finalized ticket to the user. The app will also be used by the theater to track the wants of the user.

The app will work like this:

1. Login
 - a. Create
 - b. Existing user log-in
2. Selection then begins
 - a. Movie and time selection
 - i. Movie with times and costs display
 - ii. User makes choices
 - iii. Displays selections and running total
 - b. Food ordering
 - i. Food options display
 - ii. User makes choice with ability to add another item
 - iii. Cost adds to running total, and displays choices
 - c. Checkout
 - i. Displays all user choices with totals.
